LIFTING**

RAISING EXPECTATIONS

JIB CRANE SLEWING

The **STREET SLEWING JIB CRANE** are available for a very wide range of applications. This is just part of Red Rooster Lifting's full range of Street equipment available.

Street slewing jib cranes are available in capacities up to 15 t incorporating the Street ZX wire rope hoist or in capacities up to 5 t incorporating the Street LX chain hoist. Jib arms may be specified with a working hook radius of up to 10 m. Our slewing jib cranes are available with either manual or power slewing mechanisms.

Street pillar slewing jib cranes are floor mounted and available with either 270° of slew in which case the jib arm rotates about a pivot post mounted one side of the pillar or up to 360° of slew with the jib arm rotating about the pillar itself. In this second case it is an option to limit slew to less than 360° by positioning end stops. Street wall slewing jib cranes are mounted on a wall or building column providing 180° of slew.

Street Crane has 75 years of experience designing and manufacturing cranes and is considered a leader in the field.

Slewing jib cranes are cost effective individual work station cranes and often operate under an overhead crane which provides general hook coverage.

Street
